Mayank Rawat

SDE 1

Portfolio: mayankrawat.dev
github.com/rawatshahab
linkedin.com/in/mayankrawat2402

SDE-1 with hands-on experience in designing and deploying scalable backend systems using **Node.js, TypeScript, NestJS, and REST APIs**, supporting **1k+ daily requests**.
Strong foundation in **microservices architecture**, authentication (JWT, RBAC), and databases including **PostgreSQL, MongoDB, and Redis**, along with **Dockerized CI/CD pipelines on Linux**.
Built and operated production-grade systems using **Nginx** and custom SMTP services (**SPF, DKIM, DMARC**), achieving **95%+ email deliverability** and **99.9% uptime**.
Proven problem solver with **150+ DSA problems solved**, strong **CS fundamentals**, and experience building **real-time systems** using **WebSockets and Redis**.

SKILLS

Tech Stack	TypeScript/JavaScript, SQL, Node.js (NestJS, Express), React & Next.js, REST APIs
Databases & Infra	PostgreSQL, MongoDB, Redis, Docker, Linux, Nginx, CI/CD
Monitoring & Tools	Prometheus, Grafana, Git/GitHub, Postman, Firebase

TECHNICAL EXPERIENCE

SDE 1 <i>The Regiment</i>	05-2025 — Present <i>Mohali, Punjab</i>
- Designed and developed scalable backend services using Node.js, TypeScript, NestJS, and REST APIs, supporting 1k+ requests/day with modular, production-ready architecture. - Implemented TCP-based microservices for internal communication, improving service reliability and latency by 25%. - Integrated React.js + Redux frontends with backend APIs using end-to-end TypeScript, reducing runtime errors by 30%. - Built a custom SMTP transactional email service, configuring SPF, DKIM, and DMARC, achieving 95%+ email deliverability. - Deployed and maintained applications on Linux VPS, configuring Nginx, SSL/HTTPS, domains, and DNS, ensuring 99.9% uptime. - Containerized services using Docker and optimized CI/CD pipelines, reducing deployment time by 40% through automation and Bash scripting. - Implemented JWT-based authentication and RBAC, and worked with PostgreSQL, MySQL, MongoDB, and Redis, improving query performance and caching efficiency by 35%.	

PROJECTS

MailTR
- Designed and developed a custom transactional mailing service using a self-hosted SMTP server, containerized with Docker and deployed via CI/CD on Linux infrastructure. - Implemented SPF, DKIM, and DMARC, along with retry queues, failure handling, and structured logging, achieving 95%+ email deliverability and reducing failed sends by 40%. - Integrated Prometheus and Grafana to monitor email throughput, failure rates, and system health, enabling real-time observability and faster incident detection (30% reduction in debugging time).
SquadUp
- Building a real-time collaborative coding platform supporting multi-user sessions and multi-language code execution. - Implemented WebSocket-based live synchronization with Redis-backed session state, enabling sub-100ms real-time updates across connected users. - Designing a scalable backend architecture with authentication, room management, secure code execution orchestration, and real-time communication, targeting horizontal scalability and fault isolation.

EDUCATION

B.Tech Computer Engineering , JC Bose Univeristy YMCA (6.8 CGPA)	05-2025
12th Non-Medical , KCM World School (85.4%)	05-2021
10th , KCM Public School (82.2%)	03-2019

ACTIVITIES

Solved 150+ DSA questions across multiple platforms
Participated in Hackathon organized by WallMart
