SUMMARY

Backend engineer with 1+ year building production microservices, API gateways, and real-time systems in Node.js and TypeScript. Rare junior-level DevOps and observability experience – Docker, CI/CD, Prometheus/Grafana, and self-hosted email infra (95%+ deliverability).

EXPERIENCE

Backend Engineer (SDE-1)

May 2025 – Present

The Regiment

Mohali, Punjab

- Architected modular REST APIs in Node.js, TypeScript, and NestJS; designed TCP microservice mesh reducing inter-service latency by 25%, enabling sub-second data sync across platform services.
- Built self-hosted transactional email pipeline (SPF, DKIM, DMARC) achieving 95%+ deliverability; containerized with Docker and Nginx on Linux VPS, cutting deploy time from 45 min to under 10 min.
- Implemented JWT + RBAC auth across PostgreSQL, MongoDB, and Redis; improved query performance and caching efficiency by 35%, supporting role-based access for multiple client apps.
- Integrated Prometheus and Grafana monitoring for API throughput and failure rates, reducing incident detection time by 30% with alerting rules that caught production issues before user impact.
- Set up GitHub Actions CI/CD with automated linting, tests, and Docker image builds for consistent production releases.

PROJECTS

NovaGate | Node.js, Redis, Nginx, Prometheus, Docker, JWT

2026

- Reverse-proxy API gateway with per-client Redis sliding-window rate limiting, JWT auth middleware, and Prometheus `/metrics`; deployed behind Nginx with SSL on Linux VPS.
- Achieved sub-10ms overhead per proxied request under 500 RPS load tests using autocannon.

SquadUp – Collaborative Coding Platform | Node.js, NestJS, PostgreSQL, Socket.IO, Redis

2025

- Engineered scalable backend handling 1K+ concurrent real-time events via WebSockets, Redis pub/sub, and PostgreSQL with <120ms event delivery.
- Built JWT auth with session management; used Redis pub/sub to fan out live edits across connected clients.

MailTR (open-sourced from production) | Node.js, Docker, Nginx, SMTP, SPF/DKIM/DMARC, Prometheus

2025

- Self-hosted transactional mailer with retry queues, structured logging, and full email authentication achieving 95%+ delivery and 40% fewer failed sends.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Bash

Backend: Node.js, NestJS, Express.js, REST APIs, WebSockets, JWT, RBAC

Databases & Messaging: PostgreSQL, MongoDB, Redis, MySQL, BullMQ, RabbitMQ

DevOps & Cloud: Docker, Nginx, GitHub Actions CI/CD, AWS (EC2, S3, RDS), Kubernetes (K3s/Minikube)

Observability: Prometheus, Grafana, Loki, ELK Stack

Security: SPF, DKIM, DMARC, SSL/TLS

EDUCATION

JC Bose University YMCA

Faridabad, Haryana

B.Tech in Computer Engineering

May 2025

KCM World School

Hodal, Haryana

12th Non-Medical – 85.4%

May 2021

ACTIVITIES

Walmart Sparkathon – Built a celebrity-driven social commerce platform: influencers post reels wearing store apparel, users preview looks and purchase via in-caption links. Owned backend API design and product-catalog integration. Active problem-solver on LeetCode/GfG (graphs, trees, DP) | Open-source contributor on GitHub
